Almond Receives $10,000 Gift For Library

The Library of Clinic Valley College has been most fortunate in receiving a $10,000 gift for the purchase of new books to be included in next year's endowment. The gift was made during the recent gift giving season and was presented to the Library by Mr. Almond, a former student of the College. The amount was received as a gift in addition to the regular library budget and came from two separate sources. An original $5,000 was donated to the Library by an anonymous donor with the understanding that the state would match that amount. The Governor came through with the matching $5,000, making a total of $10,000 presented to the Library.

The importance and value of a gift such as this cannot be praised highly enough. It represents a major step forward in the building up of a really good book collection for the Library. Books, just like everything else, have been getting more expensive in recent years. A new college library such as we have here at Clinic Valley, operating on a limited budget, has a difficult time trying to keep up with just the current materials needed. It is a gift like this which gives the opportunity to purchase needed books that might take years to afford from the regular budget. With high prices, $10,000 represents a reasonable amount of money.

A few of the more important purchases that are planned for this year are: the additions of the Encyclopaedia Britannica to our bibliographic sources right here at Clinic Valley, operating on a limited budget.

In another letter to Mr. Judd Meade, of the Library, Mr. Almond expressed the hope that the College could keep up with the rising costs of college education.

Baker's Farm

The most dangerous poisons are not always the most obvious. Sometimes, the most dangerous are the ones that are the most overlooked. For example, there is a poison called prussic acid, which is usually prepared in the form of potassium cyanide. This poison is corrosive sublimate or bichromate of potash, and it can be highly dangerous if ingested or inhaled. One of the most common forms of prussic acid is found in the closet of the average American home. It is known as “brown money,” and it is used by some in the black market to remove people from their homes or to commit murder.

On the other hand, there are poisons that are not so obvious, but just as dangerous. For example, there is a poison called mercury, which is a very common household product. It is found in many household items, such as thermometers, diodes, and microwave circuits. It is a very dangerous substance, and it can cause serious harm if ingested or inhaled. When mercury is breathed in, it can cause lung damage and neurological problems. When it is ingested, it can cause liver damage and kidney damage.

Another example of a dangerous poison is the one known as “brown money.” It is a poison that is used by some in the black market to remove people from their homes or to commit murder. It is a very dangerous substance, and it can cause serious harm if ingested or inhaled. When “brown money” is breathed in, it can cause lung damage and neurological problems. When it is ingested, it can cause liver damage and kidney damage.

There are also poisons that are used to remove people from their homes or to commit murder. For example, there is a poison called prussic acid, which is usually prepared in the form of potassium cyanide. It is a very dangerous substance, and it can cause serious harm if ingested or inhaled. When prussic acid is breathed in, it can cause lung damage and neurological problems. When it is ingested, it can cause liver damage and kidney damage.

When prussic acid is breathed in, it can cause lung damage and neurological problems. When it is ingested, it can cause liver damage and kidney damage.
CVC Students Graduate From Charlottesville

The faculty at Clifton Valley has been pleased to learn that Robert Arlon Leonard, of Bainbridge, was graduated with distinction, in the School of Commerce, at the University of Virginia, in Charlottesville. Mr. Leonard is remembered at Clifton Valley as an outstanding student. The following students graduated with distinction: Lee Welles, Bachelor of Science in Mechanical Engineering; Elizabeth Farrar, Bachelor of Science in Education; and Roy Kiser, of Dante; Charlene Moore, of Big Stone Gap; Jerry L. Kiser, of Dante; Charlene Farrar, of Juvonville, and Paul McDonald, of Arlington.

Dean's List Announced

The Dean's List for the second semester was published during the past week. In order to qualify for the Dean's List, students must pass at least 14 semester-hours of work and have an average grade of at least a B in all courses. There were 18 students on the Dean's List during the past semester.

Cllntwood led the way by placing four students on the list. These students were Betty Carol Mullins, Frank H. Quinney, Harold W. Rakes, and James P. Renter.

Coeburn and Wise were next with three students each. From Coeburn, there were Mses. Barbara B. Baker, James T. Counts, and Thomas M. Counts. From Wise were Edward N. Carter, Parrell Sanders, and Mrs. Ruth Womack.

There were two students on the Dean's List from Norton and Pound. Albert Bond Jr. and Frank Bucyr Jnr. represented Norton and from Pound, there were Bill Maxwell and Billy Ray Womack.

The following students also earned this honor: Janice Burleson, of Blounts; Kenneth R. Cooper, of Big Stone Gap; Jerry L. Kiser, of Dante; Charlene Farrar, of Juvonville, and Paul McDonald, of Arlington.

GIFT

(Continued from Page 1)

The Library would like to take this opportunity to make public its sincere appreciation of this most worthwhile gift and thank most heartily those persons responsible for it.

LOWEST TELEPHONE

The lowest telephone in the world is 100 feet beneath the ground, in the lunchroom of the Carlsbad Caverns, New Mexico.
